THE LOG SCALE warm paper → deep ink · twelve steps

Log 50 #F7F3EE	Log 100 #EAE1D7	Log 150 #D8C9B6	Log 200 #CFAD8E	Log 300 #BD8C68	Log 400 #A16E50
Log 500 #835A49	Log 600 #335260	Log 700 #163F54	Log 800 #0D2F42	Log 900 #0C222F	Log 950 #0B1720

THE CREW eight accents, each a character; light · dark variants

Ahab	red	#931432	#E3877C	errors, alarms, destructive actions
Starbuck	blue	#006A98	#A6DFFF	functions, primary actions, hyperlinks
Queequeg	indigo	#253E82	#838CCF	types, classes, interfaces
Pip	yellow	#6A4A00	#DEC577	numbers, literals, highlights
Ishmael	grey	#6A6164	#BFB8B6	comments, punctuation, muted text
Stubb	orange	#AA430B	#FFD9BB	constants, warnings, changes
Tashtego	green	#06724B	#82C4A2	strings, success, additions
Daggoo	brown	#552823	#A7766F	variables, references, identifiers

PROSE SAMPLE · LOG 800 ON LOG 50

Pequod is a palette designed for long reading. Paper to ink, with eight accent hues drawn in the same pigment register — earthy, muted, the colours of things that have been in the world long enough to weather. The whole thing is named after the whaler in *Moby-Dick*, and its accents are named after the people who sailed her.

Most terminal and editor palettes are optimised for glance, not reading. Saturated primaries tire the eye after ten minutes. Pequod aims for comfort at hour four.

CODE SAMPLE · DARK (LOG 950 + CREW ACCENTS)

```
# Apply the ICD-10 cohort definition for acute MI
def build_cohort(df: DataFrame) → DataFrame:
    """Select first admissions with a primary ICD-10 I21.* code."""
    mask = df["primary_icd10"].str.startswith("I21")
    return (
        df[mask]
        .sort_values("admission_date")
        .drop_duplicates("patient_id")
        .head(1)
    )
```
